

Home (/en/home)

provides a detailed overview of accidents and

occurrences across the different aviation domains, and examines both

long-term trends and new developments.

While the ASR 2025 confirms that Europe remains one of the safest regions for aviation, it

also emphasises that vigilance is essential. Continuous

monitoring of risks, learning from occurrences, and

adapting to emerging challenges, such as drone

integration and new technologies, remain critical.

Highlights from the 2024 data

- **Traffic levels:** European air traffic continued its strong recovery with over 7.7 million flights operated by 623 air operator certificate (AOC) holders.
- **Global context:** There were 14 fatal accidents worldwide in 2024 with 304 fatalities. These statistics are both in line with the 10-year average.
- **Commercial air transport (CAT) — Aeroplanes:** Europe saw 3 fatal accidents leading to 3 fatalities.

- **Drones / Unmanned aircraft systems (UAS):** The reporting of occurrences continues to increase, underlining the growing importance of safe integration into the European airspace. This is a key part of EASA's U-Space implementation.
